Summary

I have 4 years of experience as a System Analyst, where my expertise focuses on analysis business process, data and technology. With my experience, I was leading product development end-to-end process, translate complex business needs and improvement product to increase revenue and growth users. In addition, I led digitalization projects in collaboration with across departments, such as warehouse, procurement, finance, logistics, and general affairs, driving business process improvements through system implementation across each function. Experience with any SDLC model, waterfall and agile according to business requirement. I also ensure high-quality end-to-end delivery in terms of performance, user experience, design, integration, timely delivery, and documentation.

Work Experience

Fujitsu Indonesia (2023 – Present)

- **Business System Analyst (Consultant Toyota Indonesia)**

- Managed end-to-end system development as Internal Consultant for the Logistics business unit, delivering 4+ projects to go-live using Waterfall and Agile methodologies, from project planning and daily monitoring to operational support during development and post-go-live.
- Led digital transformation initiatives for logistics operations, redesigning business processes and systems to reduce operational cost, optimize warehouse space, and shorten process cycle time.
- Gathered user requirements through stakeholder interviews and operational data collection, identified user pain points, and translated them into BRD, FSD, and UI design/screen specifications.
- Analyzed end-to-end business operations and existing systems, mapped AS-IS and TO-BE business process flows, and proposed process and system improvements with technology recommendations aligned with company regulations and IT standards.
- Designed ERP modules for a Global System project with Toyota Japan and Toyota Thailand (Procurement, Supplier Management, Customer Order, Invoicing, Warehouse, and Trucking Delivery), and translated business requirements into system logic for the supporting local systems.
- Analyzed existing system logic and data structures to assess the impact of new business requirements, designed data models and system integrations, and reviewed vendor technical documents to ensure alignment with functional requirements.
- Coordinated business, IT, and vendor teams to align system expectations, bridged conflicting requirements across stakeholders, and resolved blockers to keep projects on track.
- Developed and controlled project schedule, budget, and daily progress; set task priorities for the development team, identified project and budget risks with mitigation plans, and escalated critical blockers to IT management.
- Prepared and presented project progress, business cases, risks, and benefit analyses to executive management to support decision-making and project approval.
- Defined testing strategy and test scenarios, and led SIT and UAT with end users, ensuring system readiness with minimal post-go-live issues.
- Built logistics cost and compliance dashboards in Power BI, maintained the data warehouse on Cloudera, and developed Talend data integrations to feed the dashboards.

Jojonomic Indonesia (2022 – 2023)

- **Product Owner (HRIS & Officeless No Code Platform)**

- Gather and analysis business needs and trend, conduct market research, analyze competitor and identify opportunities revenue and prioritize product features.
- Collaborated with cross-functional teams (backend, frontend, mobile engineers, QA) to translate business needs into technical requirement and facilitate team to brainstorming best practice solution while development.
- Product documentation and design system: API JSON, UI design, Feature Descriptions, Acceptance Criteria.
- Manage agile activity such as act Scrum Master to execute sprint planning meeting, daily standup, and sprint review activity.
- Collaborated with QA team to define test scenario, identify early potential issues and preparation action plan, ensure product quality and integration of performance.
- Provide support troubleshoot system issue, analyze issue and coordination with team to fixing.

Education

Bachelor Degree of Information System, Brawijaya University, Malang (Indonesia) – (2017 - 2021)
Activities: Nol Derajat Film, HIPMI, Olympics University Event

Interest & Personal Info

Throughout my experience as a System Analyst, I've worked to understand several industries and their business processes to support digitalization initiatives such as Human Resource, Basic Material, Manufacturing, especially warehouse and logistic, and Banking, Outside of work, I like staying updated on Indonesian economic news, business trends, and stock market insights.
