Summary

With 4 years of experience as a System Analyst, I bridge business and technology by translating stakeholder pain points into scalable solutions aligned with business goals. I lead end-to-end product development from market research through deployment identifying product-market fit, defining MVPs, and creating comprehensive product requirements. I also have experience to lead digitalization project, I analyze business operations to architect appropriate solutions, design technology systems, and produce detailed ERD/FSD documentation. In addition, I develop SQL query, data integration, and testing strategy. As a project leader, I drive cross-functional teams through proposals, planning, budgeting, risk mitigation, and daily execution ensuring on-time, on-budget delivery while maintaining team accountability.

Work Experience

Fujitsu (2023 – Present)

IT PM & Business System Analyst (Onsite Material Resource @Toyota – Logistic Departement)

- Led 4 IT development projects over 3 years, managing 8 cross-functional vendor teams across 8 systems and 50+ data integrations, using Waterfall and Agile methodologies.
- Facilitate cross-country meetings, user requirement clarification and system process flow.
- Gathered user requirements and conducted feasibility studies to identify business pain points, define project scope, and align technology solutions with business objectives.
- Designed comprehensive technology solutions and system architectures that addressed business requirements and supported strategic initiatives across multiple departments.
- Managed stakeholder relationships and coordinated between IT, business units, and external vendors; resolved conflicting requirements and eliminated project blockers to maintain schedule adherence.
- Managed Digital Transformation project budgets totaling \$12M+ and optimized resource allocation across concurrent projects, ensuring cost efficiency and team productivity.
- Identified project risks through impact analysis and implemented mitigation strategies throughout the project lifecycle, maintaining 100% schedule compliance.
- Defined testing strategies including test scenarios, validated API endpoints, and ensured security compliance and readiness for penetration testing.
- Developed data analytics dashboards and visualizations that provided actionable insights to leadership and stakeholders.
- Documented system specifications, process flows, and technical requirements for development and implementation teams
